CESBA Alps objectives

While sustainability assessment tools are already well-established for buildings and small urban areas, such tools do not yet exist for the built environment at the level of territories. CESBA Alps aims to improve the sustainability of the Alpine built environment through the development of the first assessment tool at territorial scale, which will be contextualized to regional specificities.

Through objective criteria and performance indicators addressing all dimensions of sustainability, the tool will support the sustainability assessment of a territory, the definition of objective performance targets, the decision making in planning processes and the implementation and monitoring of effective low carbon policies.

www.alpine-space.eu/cesba-alps

CESBA Alps at a glance

Innovative policies for sustainable territories

- We promote and facilitate the use and implementation of assessment tools at territorial level in low carbon policies and planning activities.
- We set reliable, measurable and verifiable performance targets in policies and territorial plans.

Sustainability Assessment

Tools for Alpine Space Territories

- We produce a sustainability assessment tool for territories (CESBA STT), which will be contextualized for each pilot region.
- We create the necessary conditions for the implementation, use and adoption by of the regional CESBA STT tools.
- A CESBA Alpine Space Passport with common Key performance indicators (CESBA KPI) allows the comparison of different regions.

Pilot testing: territorial assessment and training

- We produced a guideline, a toolbox for implementation, and we support pilot testing and training on local level.
- 9 local CESBA Committees (CLCs) will be established to implement and test the CESBA STT tool in the pilot regions.
- The 9 pilot regions are: Liechtenstein, Lombardia, Provence Alpes Côte d'Azur, Piemonte, Auvergne, Rhône Alpes, Slovenia, Upper Bavaria, Veneto and Vorarlberg.

CESBA

The collective initiative for a new culture of Built Environment in Europe

CESBA association seeded the project CESBA Alps and disseminates results via its international network. The goal of CESBA is to facilitate the diffusion and adoption of sustainable built environment principles among all the stakeholders through the use of harmonized assessment systems in the whole life cycle of the built environment.

CESBA Principles

- The user first!
- Sustainability
- Regional contextualization
- Comparability
- Mass-oriented
- Simple to use
- Open source
- Co-creation
- Transparency

CESBA is a meeting point between top-down and bottom-up approaches. CESBA is a process towards new built environment standards in Europe.
