IMEAS WEB PLATFORM

The [IMEAS project](#) aims at the development of harmonized and integrated methodologies to support successful low-carbon energy transition strategies. It promotes networking and sharing of knowledge and experience to co-create sustainable energy models. The [IMEAS web Platform](#), one of the project's main outputs, is intended to be a toolkit with easy-to-use documentation, reference and innovation examples from project partners and other contributors. It is a community of people and institutions sharing tools and experiences to:

- connect communities and their values;
- foster cooperation and knowledge exchange among different players;
- share with a wide audience guidelines, tools, and concrete practices;
- set people into motion and find multidimensional and cooperative approaches.

The Platform is open to professionals, institutions and citizens from different Countries, governance levels and economic sectors who want to promote the integration of low-carbon energy policies. It gives access to a transnational set of tools and guidelines to support sustainable energy models in a multi-dimensional vision (i.e. an approach that takes into consideration horizontal, vertical, trans-sectoral and transnational links between different set of actors with the same societal mission). Its contents address in particular technicians from regional and municipal agencies and Public Administrations, policy makers, researchers and entrepreneurs.

The main language of the platform is English, to ensure the wider possible audience and transnational fallout. Some contents, however, are available in other languages.

The IMEAS web Platform contains a Public area (with pages about the IMEAS project, news and events) and an Area for registered users, with full access to all contents, community profiles and to uploading services. By registering, users can access ready-to-use tools, guidelines, references and documentation, and enter a Community of stakeholders and experts sharing knowledge and experiences. An essential feature of the IMEAS web Platform is indeed the possibility given to the users to upload contents and documentation (short notes, open access, articles, case histories, etc.) and to promote news and events concerning energy and climate. After publication, the Platform team at ENEA promotes the products through its social media.

The IMEAS web Platform is composed by four main sections: *Contents*, *Community*, *Events* and *News*.

The *Contents section* (available only to registered users) includes products on the following main topics: *governance and policies*, *data and models*, *planning and implementation*, *stakeholders engagement*, *low-carbon transition*, *technologies*, *joint actions*, and on an additional category including other topics about energy and climate.

Governance and Policies	Data and Models	Planning and Implementation	Stakeholder Engagement
Low Carbon Transition	Technologies	Joint Actions	Other Topics

The typologies of the products in the *Contents* section are: guidelines, documents, tools (web-based or offline), case histories, videos and schemes/images. Products from the IMEAS Project are labelled as *IMEAS Contents*. The other products are uploaded by the Community members (registered users) through dedicated upload forms.

DATA AND MODELS

- DOCUMENT** Listed in:
Stakeholders' network model interface
 ● IMEAS content
 by Admin Imeas
- GUIDELINE** Listed in:
Managing energy and climate data in horizontally and vertically (MLG) integrated models
 ● IMEAS content
 by Admin Imeas
- WEB-BASED TOOL** Listed in:
Multiregional energy modelling using open source software
 ● IMEAS content
 by Roberto Brunelli
- OFFLINE TOOL** Listed in:
IMEAS Energy and Climate Data Inventory
 ● IMEAS content
 by Anja Aschenbrenner
- GUIDELINE** Listed in:
Baseline Emission Inventories as a means to assess current status and potential CO2 reduction
 ● IMEAS content
 by Thorsten Böhm

PLANNING AND IMPLEMENTATION

- GUIDELINE** Listed in:
GUIDELINE: The real low carbon model: energy Efficiency in all parts of living OR How to trigger change towards a low carbon society
 ● IMEAS content
 by Franziska Wirth
- GUIDELINE** Listed in:
Guideline: Integrating Municipal and Stakeholder Approaches for Sustainable Mobility
 ● IMEAS content
 by Anja Aschenbrenner
- GUIDELINE** Listed in:
Integrating SEAPs/SECAPs with energy plans on higher governance levels
 ● IMEAS content
 by Catherine Premat
- WEB-BASED TOOL** Listed in:
Multiregional energy modelling using open source software
 ● IMEAS content
 by Roberto Brunelli
- GUIDELINE** Listed in:
Multi-level and multi-sectoral low carbon energy planning in the AS area: a common baseline for integration
 ● IMEAS content
 by Admin Imeas

In the *Community* section registered users can meet the other members of the Platform, finding out the common fields of interest and expertise. The Community aims to build a network of stakeholders and experts, both individuals and institutions that share their experience to co-create models and tools in order to support the implementation of successful initiatives. Through the *Community* section we wish that users can build new opportunities, getting in contact with professionals and institutions from other governance levels and economic sectors, joining discussions about how to overcome non-technological barriers in energy transition strategies.

Tavolo di confronto IMEAS – Azioni congiunte per un approccio integrato nella gestione dell'energia

Energy efficiency and renewables have a crucial role in the current energy transition. Which actions are needed to support Local Authorities with the technical definition and implementation of energy efficiency measures? How to guarantee the access to energy consumption data? Which actions we can develop to overcome the non-technological barriers to the deployment of renewable energy? How we can

IMEAS Final Event

The IMEAS Interreg Alpine Space project, dedicated to support integrated and sustainable energy policy planning in the Alpine Space is coming to an end. The project partners are pleased to invite you to their final event. The event is organized in the framework of the EUSALP Annual Forum. You will have the opportunity to attend the Forum Sessions on 28th and 29th and to play a part in our workshop

C-Track 50 roundtable in Athens: challenges for carbon neutrality

European experts and national representatives from 11 EU countries gathered in Athens to talk about EU climate and energy policies data monitoring and sharing, challenges for carbon neutrality and the role of multi-level governance. The roundtable was launched with some countries presenting their action plans and challenges faced during their implementation. It happens that many countries face sim

Gemeinsames Handeln für eine integrierte Energiepolitik und Energieplanung

Im Alpenraum werden verschiedene Klimaschutzinstrumente auf kommunaler und regionaler Ebene verwendet. Solche Instrumente sind beispielsweise die Einführung eines Energiemanagementsystems, die Umsetzung eines Mobilitätskonzeptes oder die Gründung einer Bürgerenergiegenossenschaft. Inwiefern diese Instrumente von den Kommunen, Landkreisen oder Regionen tatsächlich implementiert werden, hängt

It only happens together: Energy transition needs all – eza! video for your homepage

Energiewende im Allgäu – das geht nur gemeinsam! Nur wenn jeder mitmacht, kann sie gelingen. eza! hat hierzu einen tollen Kurzfilm gedreht. Der Film zeigt, wie wir es schaffen können: mit engagierten Menschen, die Ideen entwickeln und sie umsetzen. Die Bilder wecken Emotionen. Überzeugen Sie sich selbst! Bitte unterstützen Sie den Weg zur Energiewende in unserer Region mit der Veröffen

The **IMEAS web Platform** aims at creating a **community** and at being a **living up-to-date repository** of **tools, guidelines** and **contents** on topics concerning **energy transition** and **low-carbon energy systems**. It was designed to be online and active also after the IMEAS Project closure (31st December 2019), relying on the contribution from the IMEAS Partners, who committed themselves in its long-term management, and from the Platform users.
